

Clean Air, Cleaner Facility Removing the Airborne Flu Virus

Most experts think that flu viruses are spread mainly by droplets made when people with flu cough, sneeze or talk. These droplets can land in the mouths or noses of people who are nearby or possibly be inhaled into the lungs.*

AeraMax Professional's hospital-type filtration includes True HEPA filters that capture 99.97% of airborne particles as small as 0.3microns.

Air Impurities Can Travel Great Distances

Virus Transmission in indoor Air - Steven Welty CAFS, IE, LEED AP

AeraMax® Professional Captures the Airborne Flu Virus

The AeraMax Professional Air Purifier was demonstrated to be effective in reducing airborne concentrations of influenza A aerosol in a test chamber, reaching 99.9% airborne virus reduction within the first 35 min of operation.
